DETAILED ACTION

Response to Amendment

1. Applicant's arguments, in view of the amendments, filed 7/24/06, with respect to claims 1 and 13 have been fully considered and are persuasive. The rejection of claims 1, 11-13, 20 and 21 has been withdrawn.
2. Claims 2-10, 14-19 and 22 have been cancelled.

Allowable Subject Matter

3. Claims 1, 11-13, 20 and 21 are allowed.
4. The following is an examiner's statement of reasons for allowance:

Lee (U.S. Pat. 6,067,520) teaches a system for dictionary adaptation based upon user correction of recognition results.

Witschel (U.S. Pat Pub. 2001/0051868A1) teaches a system for adapting language models in a speech recognition system that calculates the probability of a word given a class using an n-gram probability associated with the class to which the modified entity is added.

Hon (U.S. Pat. 5,852,801) teaches updating a language model in a speech recognizer that calculates the probabilities of the new words based upon their n-gram probabilities.

None of the prior art on record teaches estimating the conditional probability of a modified entity given the class it belongs based on **both** the n-gram probability associated with the decoded entity and an n-gram probability associated with the class

to which the modified entity is added. It would not have been obvious to one of ordinary skill in the art at the time of invention to modify the prior art on record to arrive at the Applicant's invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wada et al. ("Robust language modeling for a small corpus of target tasks using class-combined word statistics and selective use of a general corpus") teaches a method for calculating the conditional probabilities of speech terms using class-based n-grams.
